Purchasing and mounting of television and small PC is the responsibility of the store or facility. However, we do make recommendations and provide Amazon links for PC to make it a simple process.

**Pricing may be subject to change.*

SmoothWebLifeTV Digital Signage Service

Customized Digital Signage Service

Hardware Setup

To set up your digital signage, you will need a few key components. Firstly, a display is required, preferably a large LED TV, which will serve as the visual output for your signage. Additionally, a Windows-based computer with internet access and HDMI connection is needed to run the software. The computer can be a tower, desktop, or small form or stick PC, as long as it is running Windows 10 or a higher version.

Software Setup

We take care of the software setup to ensure a hassle-free experience for our clients. There are a couple of installation options available. One option is to set up a remote session either by you or your IT department on the signage pc where our team can install the software. Alternatively, you can mail or purchase the PC and have it sent to us for setup. Once the setup is complete, we will mail it back to you.

Usage

Our management website allows you to access and update your screen content or schedule from any device. The system downloads all the content and plays it locally on the display, which means that even if the internet connection goes out, your content will continue to play uninterrupted. When the internet connection is restored, any new data will be downloaded. This ensures that your content is always up to date and playing seamlessly.

Customization

We offer extensive customization options to tailor the system to your specific needs. We can incorporate requested features that align with your business requirements. Moreover, we can make the system reflect your business branding, or you can provide us with your own design for a personalized touch.

Technical Support Included

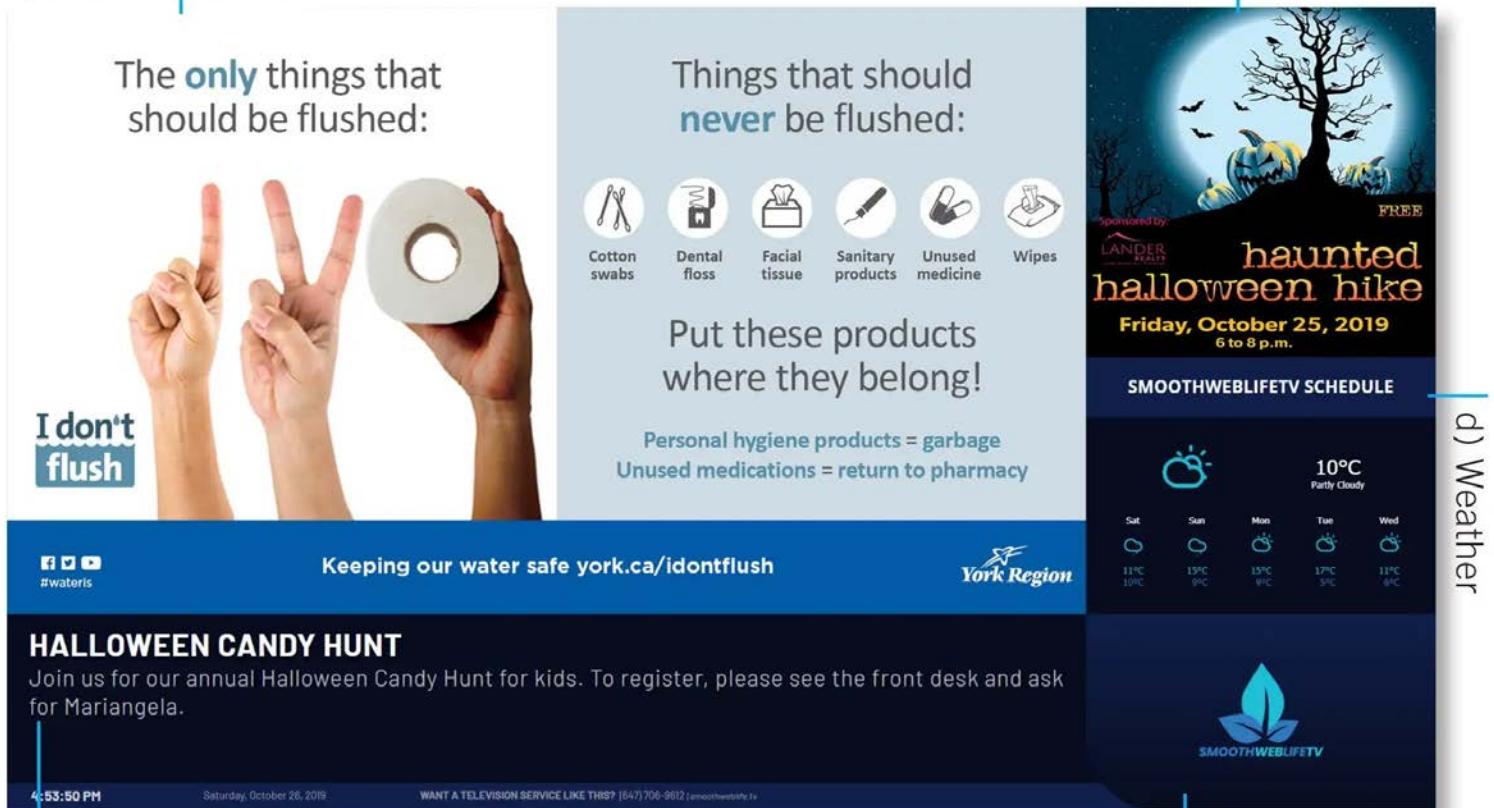

Although our system boasts exceptional uptime, with many customers reporting years without needing to contact us for assistance, we understand that issues can arise. In such cases, we provide comprehensive technical support. If you have an IT department, we collaborate with them to ensure a swift resolution. It's worth noting that most errors tend to be related to the PC itself rather than our software, as our software undergoes rigorous testing and regular updates.

Training

We offer training sessions to familiarize your entire staff with our software. We believe in empowering our clients to manage their digital signage effectively. In addition to training, our support team is always available to address any questions or concerns you may have.

COMMUNITY CENTRES

a) Events and Information

The primary section of the digital signage screen showcases a rotating playlist of vital information and events through captivating images and engaging videos both directly uploaded or from YouTube.

b) Social Media and Promotions

This playlist allows you to upload and schedule your facility promotional content and automatically load your social media posts. The system then automatically downloads your Instagram images and video into this section.

c) News and Messaging

This section allows you to display messages directly from our system, your website blog, and your Twitter feed.

d) Weather

This section is a playlist that shows your local weather in your company colors, our new Hall Booking App or use this space to sell advertisements to offset your cost.

e) Logo

We customize the colors of the entire interface and add your logo.
